## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. None of the claims define the boundary of the first resonator having a length of .8 mm, 1 mm or 1.5 mm; thereby it is not clear where within the laser system is the first resonator located.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily

Art Unit: 2828

published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Ishikawa et al (PN 6,058,126).

Figure 1 illustrates a laser system having a semiconductor laser unit (11a), which provides a pump beam of 797 nm, a solid-state gain medium of Nd:YLF (11c), a second harmonic generator crystal (11d), a reflection coating (11c') and an output mirror (11e). The reflection coating and the output form the resonators where the reflection coating provides reflection to the beam produced by the solid state gain medium and antireflection to the pumped beam of the semiconductor laser unit. Output mirror (11e) provides output for the second harmonic generated beam and provides reflection to the beam produced by the solid-state gain medium. As shown in figure 1 the laser system provides a first resonator between the output mirror (11e) and the semiconductor laser unit (11a), which is greater than .8 mm and second resonator between the output mirror (11e) and the reflection coating (11c').
